The AV1 video codec, first standardized by AOMedia in 2018, has rapidly evolved and gained widespread industry support. Today, leading companies like YouTube, Netflix, and Meta stream video using AV1 at scale. Meta introduced AV1 for real-time video calls on high-end devices in 2023, aiming to deliver superior call quality. Since then, we have made notable progress in expanding AV1's reach and improving the experience for AV1-powered calls. Today, AV1 is enabled on the majority of mobile devices in Meta Real-Time Communication (RTC) applications such as Messenger and WhatsApp.
